

Introduction :

- Here's a description for the client's requirement  
" We are a club that provides different sport sessions .  
We want to develop a mobile app that allow users to book any session they would like to attend and that is not fully booked.  
Also the user can browse for sessions based on sports and spots availability"

Requirements : Implement Api's for the following

- List all sports the club provide .
- List all session sorted by sport .
- Get session based on specific sport
- Get all sessions having available slots .
- Get sport name that have max no of attendees .
- Book a session for a user .
- Get user's session sorted by booking time .

Ps : Use MySQL to create the database and php as scripting language (preferable Laravel framework)
